Drivers For Change In Education

There are many aspects of our education system that have limited us from meeting the needs of all students. The pandemic highlighted these aspects and also elevated the opportunity that blended learning presents to close the gap.

Blended Learning benefits all stakeholders in a student’s education journey

- My child is happier and we have more flexibility with our schedule
- I can learn anywhere, anytime at my own pace
- Flexible tools enhance my ability to meet the needs of each student
- It is easier to collaborate and share resources with colleagues
- Our teachers are empowered to support individual students’ needs and have the structure to do so

Consider Instructional Delivery Models

Instructional delivery models are an important consideration as you assess your options. While there are many recent and relevant terms used for these models, there are three main types to consider.

1. **In-Person Learning**: Students learn in the same physical location.
2. **Virtual Learning**: Students learn through online content and connections.
3. **Blended Learning**: Students learn through a combination of the best aspects of in-person learning and virtual learning. Digital tools and resources enhance relationships, content, individualized learning, and student choice.

Embrace Blended Learning

Blended learning can be an effective solution that enables:

- Anywhere, anytime learning
- Students learning at their own pace, on their own path
- A flexible and agile solution for students and teachers

Assess Your Options

There is no one-size-fits-all path to PCBL. SETDA has developed a tool to help you chart your district’s path by exploring four key areas:

- **Purpose and Vision**
- **Logistics and Alignment**
- **Learning Model Redesign**
- **Sustainability**
